FOREWORD

It is strange there should be so much majesty in a word clothed in the habiliments of humility. Yet instinct in every one of us is the urge to serve humanity. Under the banners of SERVICE all of us want to march. And not to man alone is this urge confined. The warm rains which clothe the hills with verdure in the spring; the ceaseless tides which ebb and flow forever in the seven seas; the winds that blow from pole to pole; the soaring skylark and its matchless song—are all of them instinct with that thought of SERVICE which permeates the universe.

It was SERVICE which sent the gleaming galleons forth to sea; which led Columbus across the dreary wastes of waters to another and a newer world; it is SERVICE which has conquered sickness and disease and will yet conquer war; which has led people out of slavery into the light of liberty; which has built nations and cities, religion and culture.

Emblazoned, therefore, upon the coats of arms of all of us is the legend ICH DIEN—I serve. SERVICE is a golden thread that runs not only through the hearts of men, but through hills and mountains and valleys, through rivers and seas, through suns and moons and planets, out into the unseen depths of the universe, far out and beyond, until at last it rests in the hands of the Source of Power Itself.

Neither man nor industry can progress or live without SERVICE. As one more contribution to SERVICE, therefore, we dedicate to the Lighting Industry this catalogue and the idea which it contains. It is so far the culmination of our SERVICE—but it is not the end. Other needs will bring new demands, for Progress is infinite. But today our SERVICE is in the van of Progress and we shall try to keep it there.

GILLWAY UNITS

We believe that no service is wholly satisfying unless it is complete. It was in recognition of this fact that some years ago we inaugurated among glass factories a new idea—the packing of illuminating glassware in corrugated cartons, with the consequent elimination, in great part, of breakage and the annoyances incident thereto. It was in further recognition of this fact that subsequently we were the first to cancel the package charge, notwithstanding a notable improvement in the manner of packing lighting glassware; and two years ago in our laboratories here, after years of concentrated experiment and research, we perfected the most efficient lighting glass ever developed—HYPERION GLASS.

And now, to meet a new need which has arisen and become acute—for progress is constant—we offer to the Lighting Industry a further service—materialized in GILLWAY UNITS. This new service is based upon the belief that the Lighting Industry ought to be able to purchase, at a reasonable and competitive price, LIGHTING EQUIPMENT from ONE SOURCE as ONE THING. Consequently, we who were formerly manufacturers of lighting glassware only, are now, in addition, manufacturers of lighting equipment also. In other words, we make available to the Lighting Industry—to those members of it who are in need of this service—not glassware only, but glassware and fixtures as one thing, WIRED, ASSEMBLED AND PACKED IN INDIVIDUAL CARTONS—READY TO INSTALL. We shall, of course, continue to offer to the Industry glassware* only, as heretofore, but in our GILLWAY UNIT DEPARTMENT we offer also the completed product—we offer not only glassware but lighting equipment as well.

And what does such a service mean? It means conservation of stock room, elimination of dirt, of breakage, and of wasteful shop labor costs. It instantly and effectively removes from the Lighting Industry its most persistent and substantial annoyances. It means that hereafter there is no need on the part of any member of the industry to purchase his glassware from one source, the component parts of the unit from numerous others—bring them into his warehouse and there, at considerable trouble and expense, assemble them into the complete product.

One would not think, for example, of purchasing the component parts of incandescent lamps from various sources—the glassware from one, the metal base from another, the filament from a third, with consequent delay, trouble and expense.

In other words, the Lighting Industry can purchase lighting equipment from us as it now purchases incandescent lamps—as a unit, intact, and sell them in that way. It is possible to order one unit, ten units or a thousand units—and each and every one of them is wired, assembled and packed in individual cartons, ready to install.

In the pages of this catalogue are illustrated commercial and residential GILLWAY UNITS suitable for every demand of illumination. They are composed of Hyperion—the most efficient lighting glass ever developed and attractive and substantial fixtures. We invite the most careful analysis and investigation of their merits and of their significance—the concrete materialization of an idea and of a service.

GILLWAY IS THE HIGHWAY TO SUCCESS

*We do not sell fixtures alone. If glassware, illustrated in this catalogue, is desired without fixture, refer to our general catalogue No. 13, illustrating our complete line of glassware only.

Each Gill-Way Unit is wired and packed complete with Glass in an individual carton

Wiring Specifications

All *Gillway Units* listed on the foregoing pages of this catalogue are equipped with wire and sockets approved by the National Board of Underwriters. The sockets are installed in and attached to their respective holders; the wire in all cases is attached to the socket, one strand of which has a tracer to denote polarity and both strands laced through the chain (if suspension type) to canopy, with six inches extra wire, beyond end of stem. On such units as is necessary hickeys are furnished; on others, such as ceiling types, crossbars and screws are supplied, also approved connectors for making installation without soldering or taping the wires.

In other words, *Gillway Units* are supplied complete ready to install. "Just send the carton on the job."

Finishes

The finest grades of Enamels and Lacquers are used in our Enameled Finishes —and applied by the most modern and approved methods and each article is carefully inspected before shipping.

These finishes can be washed with soap and water. They will not chip or crack except when exposed to intense heat and while even under such conditions, flaking is improbable, it is possible and cannot be guaranteed against.

Our Plated Statuary Bronze Finish is of the highest quality and workmanship possible to obtain in the most completely equipped plating plant in the country.

How To Order

1. Under each item illustrated in this catalogue will be found full description: the number of holder or hanger; number and size of glass; and, if decorated, a letter to denote decoration, also; finish and list price.

2. When ordering use care and specify: *first*, the number of hanger or holder; *second*, number of glass if plain, and if decorated, the number and letter following, which denotes decoration; *third*, the finish (we do not sell hangers or holders without glass); and *last* the price at which it is listed.

3. Orders on which specifications are not definitely clear cannot be filled without considerable loss of time consumed in writing for needed information. Follow instructions when ordering and facilitate prompt service.

4. State clearly how the goods ordered are to be shipped, whether by freight, express or otherwise. If there is any preference for a certain route, it should be mentioned on the order.

5. Great care is used in filling orders promptly, packing goods properly and obtaining receipts from carriers for delivery in good condition. We cannot, therefore, be responsible for goods damaged or lost in transportation. All possible precautions, however, will be used to prevent injury or delay and if requested, shipment will be traced.

6. All claims concerning the shipment of goods must be made within one week after their receipt.

7. When referring to orders always give the number and date of your order.

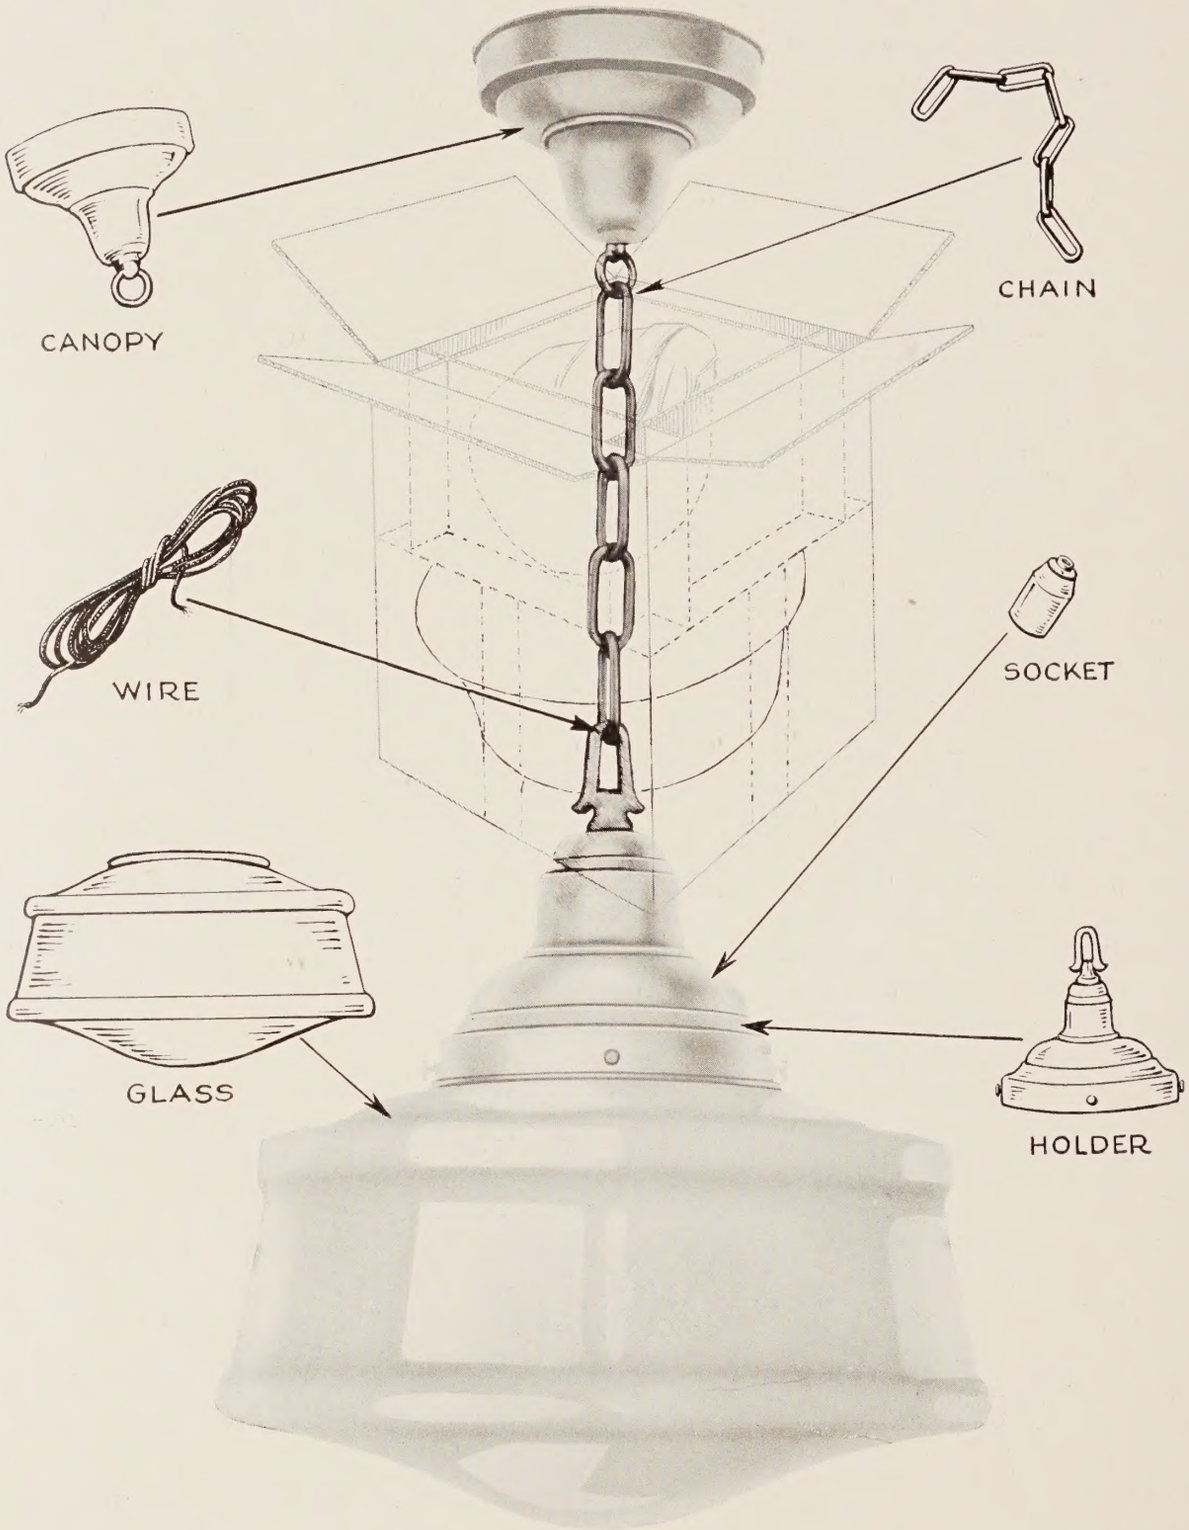
8. Orders from persons unknown to us, unless properly rated by commercial agencies should be accompanied by draft or business references, or, if desired to be sent C. O. D., an amount sufficient to cover express or freight charges.

Gillway Units Department

GILL GLASS COMPANY, INC.

PHILADELPHIA, PA., U. S. A.

Difference between the Oldway and the Gillway



THE OLDWAY—Lighting Equipment built up from many things, secured from many sources.
THE GILLWAY—Lighting Equipment obtainable from one source as one thing.

Each Gill-Way Unit is wired and packed complete with Glass in an individual carton

TEN "GILLWAY" VIRTUES

(Possesses No Evils)

vs

TEN "OLDWAY" EVILS

(Possesses No Virtues)

TEN "GILLWAY" VIRTUES

1. Each "GILLWAY" fixture is wired complete with approved material.
2. The wire used on all commercial suspension type "GILLWAY" units is approved slow burning No. 14—$\frac{3}{64}$ insulation, for 300 watts or more; slow burning No. 16—$\frac{1}{32}$ insulation for 200 watts or less; No. 18—$\frac{1}{32}$ insulation, regular fixture wire used on all suspension type residential units.
3. The wire used on all suspension type "GILLWAY" units, (except white enamel finish, on which white cotton is used) is silk covered and of a color to match finish of fixture. One strand has a tracer and the insulation at the end of each strand is stripped for connection.
4. The wiring of each "GILLWAY" fixture is tested for polarity and shorts before leaving our factory.
5. Each "GILLWAY" fixture is equipped with $\frac{3}{8}$" Female Hickey or with Crossbar, $\frac{3}{8}$" Locknut and Screws, according to its individual requirements.
6. Each "GILLWAY" fixture is equipped with two approved Solderless and Tapeless Connectors. This feature alone saves approximately twenty cents in labor on each fixture installed. Makes better and safer connections.
7. The Holders of all "GILLWAY" Commercial Units are aluminum finish inside to further increase the 87% to 90% efficiency of HYPERION GLASS.
8. Each "GILLWAY" fixture is carefully wrapped in heavy paper to protect the finish.
9. Each "GILLWAY" fixture is packed in a scientifically constructed fibre container, together with the particular HYPERION unit for which it has been made.
10. Finally—each "GILLWAY" unit illustrated in this catalog will come to you a completely assembled and wired lighting fixture, ready for installation, in its own individual container. You know to a penny your total cost. The selling price is competitive and returns a handsome profit.

TEN "OLDWAY" EVILS

1. Purchasing component parts from several different sources.
2. Receiving component parts at different times, some of which are indifferently packed, nested, or in straw.
3. Unpacking and checking of all component parts and placing in bins, computing carrying charges and costing each separate part.
4. Assembling and wiring of component parts, oftentimes lacking some minor article, such as proper color or gauge wire, nipple, locknut, hickey or approved socket.
5. After assembling and wiring, the computing of collective costs, including material and labor—positive accuracy impossible.
6. Before sending out, the fixture and glass must be wrapped and is oftentimes improperly packed, resulting in breakage of glass or damage to fixture, or both, in transit.
7. Upon reaching final destination for installation, four wires must be stripped, soldered and taped, and oftentimes it is found that some part is left out, necessitating a return trip by electrician to job.
8. Upon final inspection, installation not infrequently rejected, because of unapproved material or short-circuit.
9. Customer dissatisfied because fixture and glass do not harmonize.
10. Finally—broken stocks, uneconomic turnover, wasteful use of storage space and inaccurate or careless figuring of costs, resulting in selling prices that do not return sufficient profit, or if properly figured, too high to be competitive.

THE DIFFERENCE BETWEEN "GILLWAY" AND "OLDWAY"

IS

THE DIFFERENCE BETWEEN PROFIT AND LOSS

Each Gill-Way Unit is wired and packed complete with Glass in an individual carton

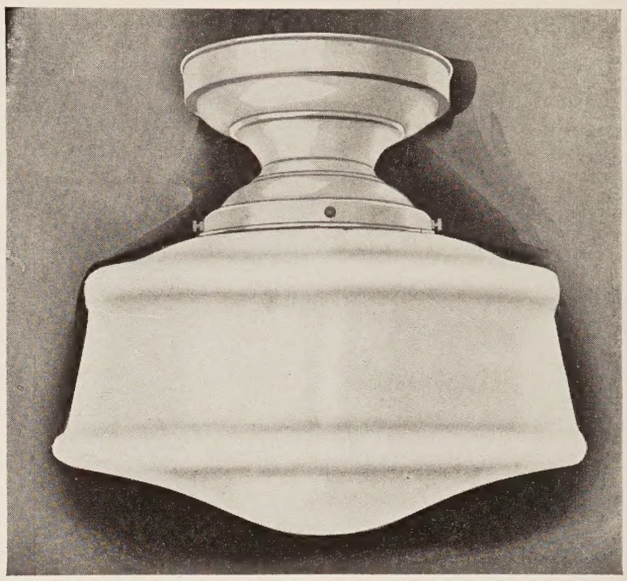
HYPERION GLASS

Everything as One Thing—Packed Complete—Ready to Install

This Unit is designed and priced to meet general requirements of commercial illumination. Wired and packed complete in an individual shipping carton.

Two Approved Solderless and tapeless connectors are included with each GILLWAY UNIT eliminating necessity of soldering and taping connections.

Suspension Type Gillway Unit



Ceiling Type Gillway Unit

Wiring Specifications

No. 30 and No. 31 Hanger—Edison base porcelain socket and No. 16 slow burning wire.

*No. 32 Hanger—Mogul base, porcelain socket and No. 14 slow burning wire.

No. 15 4″fitter Ceiling Ring—6″ dia., 4¼″ deep. Pigtail porcelain receptacle and crossbar.

No. 33 6″ fitter Ceiling Ring—8″ dia., 5″ deep. Equipped with pigtail porcelain receptacle and crossbar.

Can be furnished with asbestos wire at 20c list per unit additional.

Finished in Plated Statuary Bronze or White Enamel

(Specify finish desired)

Numbers 30-31 & 32 below designate suspension type units and the price for same is listed in column to left of heavy line.

Numbers 15 & 33 below designate ceiling type unit, prices of which are shown in last column. For dimensions and watt of glass and fitter see columns at left under those headings.

Illustrated above is our No. 31 Hanger with "F" etching on our No. 609—14" Hyperion Unit.
This, as well as "G" etching, shown on page 32, or "H" etching, on page 35, can be furnished with the above Hanger.
The "F", "G", or "H" etching can also be had with any of our other Hangers illustrated in this catalog, prices of which, with different Hangers, are listed above.

Note. To order, select the Hanger desired, also the number of glass and size, and specify by affixed letter the etching desired.
Example—You wish to order No. 38 Hanger, shown on page 28, with No. 609—14" Unit, shown above with "G" etching, shown on page 35—you should write your order 38/609G, specify the finish of Hanger and find your price in column 5 above, which would be $13.00 list.
Be sure to give the number of the Hanger, number and size of glass and the etching desired.

Each Gill-Way Unit is wired and packed complete with Glass in an individual carton

In Response to an ever Increasing Demand for Safety or Screwless Holders for Units

We show on pages 16 and 17, our own exclusive design, strong, dependable and safe *screwless holder* made of 22 B. & S. gauge brass, the canopy of same gauge. We have adopted this type because we believe it is the only real, safe, screwless holder on the market. Many so-called screwless holders are neither screwless, safe or practicable, while this positively meets all these requirements plus many other features.

This type of unit holder has long been recognized by the entire lighting industry as the most desirable. No battered screwheads to wrestle or hurt the fingers, no defective bushings to twist out, no danger of breakage because screws have been too tightly inserted against neck of glass to allow for natural expansion and contraction. But most important of all on large installations where it is essential to clean glass frequently in order to maintain its maximum efficiency, the janitor can remove and clean the globe in half the time consumed where the screw type is employed and with practically no risk of breakage.

The answer to—"Why hasn't it been universally used?" is price. Heretofore, the price of screwless holders has been so much higher than the screw types that its advantages have been obscured by the cost factor. By assembling, wiring and packing hanger and glass in one factory under one roof, we are able to offer this greatly improved type at just a few cents more per unit than the most inexpensive and competitive lighting unit on the market.

This improved holder is shown in ceiling and both stem and chain suspension types. It meets every requirement of architect, builder and the National Board of Fire Underwriters. It is finished in heavily plated statuary bronze, and while it is illustrated here with only two shapes of glass, it can be furnished with *any* Hyperion Luminaire of corresponding size fitter. For the perfect installation, large or small, recommend *screwless holders—safe—secure—economical—attractive.*

Each Gill-Way Unit is wired and packed complete with Glass in an individual carton

HYPERION GLASS

Everything as One Thing—Packed Complete—Ready to Install

Two approved solderless and tapeless connectors are included with each GILLWAY UNIT eliminating necessity of soldering and taping connections.

Canopy and patented Screwless holder made of 22 B. & S. gauge brass.

No. 58, 60, 62 and 66 wired with Edison porcelain socket and No. 16 slow burning wire.

*No. 59 and 61 wired with mogul base porcelain socket and No. 14 slow burning wire.

Can be furnished with asbestos wire at 20c list per unit additional.

School Type Hanger

Where safety screwless holder and stem construction is required for school lighting, the architect's specifications are carefully complied with. The material, construction and finish of this school type lighting unit, using Hyperion glass is the standard for high efficiency lighting.

Wired and packed complete in an individual shipping carton.

Finished in Heavily Plated Statuary Bronze only

HYPERION GLASS

Everything as One Thing—Packed Complete—Ready to Install

A new idea for efficient sanitary bathroom and kitchen lighting. Hyperion glass is the accepted standard of efficiency for bathroom and kitchen lighting. To this we now add the sanitary factor by making the holder or fixture of the same Hyperion glass eliminating all metal excepting the small amount contained in the mechanism of the porcelain lamp receptacle. An ALLGLASS screwless fixture is the result—efficient, sanitary, attractive, easily cleaned, no set screws or crossbars to adjust.

Two approved solderless and tapeless connectors are included with each GILLWAY UNIT eliminating necessity of soldering and taping connections.

Complete

No. A5—Pull chain ALLGLASS ceiling fixture **$3.60**
No. A6—Keyless ALLGLASS ceiling fixture **2.80**
Shade and canopy made of Hyperion glass. Equipped with H. & H. porcelain pull chain or keyless receptacle with adjustable attachment for connecting to fixture stud. Can be used only on fixture stud installations with outlet box not over 4″ dia.
